

What's special about our breeds and crossbreeds?

In the Nordic countries, we have recorded the health and performance of VikingHolstein, VikingRed, VikingJersey, crossbreeds, and other cattle breeds for decades.

Our innovative breeding programmes foster **healthy, efficient, trouble-free cows** with high production of milk and solids. They also have excellent fertility and a **natural defence against disease**.

Our bulls are not only the highest ranking on our own [NTM scale](#). We also have a strong international position for example on the NM\$ scale.

With data and science-driven genetics, you get the lowest use of antibiotics and hormones and the **highest lifetime production per cow**.

You get breeds that live long and last long, making your dairy business profitable, sustainable, and enjoyable.
